EDUCATION

Furman University - Greenville, SC

Aug. 2021 – May 2025

Bachelor of Science in Computer Science (*Minor in Data Analytics*)

3.6/4.0 GPA

Bachelor of Science in Applied Mathematics

Bachelor of Arts in Business Administration

Bachelor of Science in Information Technology

Winner of DataFest (Apr. 2025), Winner of Data Mania (Nov. 2024), Finalist in DataFest (Apr. 2024)

EXPERIENCE

Shoals Technologies Group (Portland, TN) | *Data Analyst*

Apr. 2024 – Present

- o Designed the company's future-state enterprise data model (300+ tables, DBML) to migrate a legacy ERP (Great Plains), CRM (Salesforce), and ungoverned spreadsheets into one governed source of truth via a strictly typed, bitemporal PostgreSQL proof-of-concept under review for next year's rollout.
- o Owned the data-quality and validation layer for a new CPQ part-creation tool, replacing a manual email-and-spreadsheet process that ran ~40% duplicates; now saving ~40 staff-hours per week.
- o Drove the CPQ platform lifecycle end to end, translating user requirements into specifications, validating builds hands-on, and triaging thousands of bugs and change requests by priority.
- o Engineered a SQL/Python pipeline consolidating 7 internal and external data sources into a market-share model that surfaced \$100M/yr in unquoted addressable markets; solo-presented to the C-suite and handed off with documentation to finance to refresh for every quarterly earnings report since.
- o Delivered Tableau dashboards and Matplotlib visualizations for Investor Day and executive review.

BMW Group (Plant Spartanburg, SC) | *Data Quality and Assembly Line Researcher*

Aug. 2024 – May 2025

- o Uncovered discrepancies between 2 internal defect reporting datasets using statistical tests, revealing potential reporting gaps and quality differences in assembly line sections for stakeholder review.
- o Launched and maintained a production Flask-based internal website to forecast and monitor assembly line bottlenecks in real time, assisting managers in reallocating resources to minimize downtime.

The Walt Disney Company (Orlando, FL) | *Attraction Efficiency Researcher*

May 2024

- o Collected 1100 data points on party sizes and seat utilization of Hollywood Studios' Tower of Terror to model and evaluate 7 seating strategies aimed at minimizing unfilled seats and line wait time.
- o Presented a human-implementable strategy to Disney cast members that reduced unfilled seats and wait time by 5%, translating to 480 additional riders per day, or \$20.8M per year in ticket sales.

PROJECTS

Chess Data Pipeline and Analysis (Personal) | *AWS + Databricks*

Jul. 2026 – Present

- o Deployed a scheduled ingestion service (Lambda, EventBridge, S3) landing ~5,800 games of personal match history from the Chess.com API as raw JSON, partitioned for monthly incremental loads.
- o Modeled game- and move-level Delta tables (bronze/silver/gold) in Databricks with deduplication and schema/row-count checks, orchestrated by a scheduled Lakeflow job with failure alerts.
- o Published a Databricks SQL dashboard of Elo progression and win rates by opening, color, and time of day, plus an XGBoost win-prediction model rebuilt on the 48-feature gold layer.

Greenville Spotlight (Furman University) | *Web Design and Development*

Jan. 2024 – Apr. 2024

- o Built a full-stack restaurant-discovery web app (Flask, JavaScript) serving Yelp API and curated menu data for 195 restaurants, with dynamic search, filtering, and an interactive Leaflet map.

SKILLS

Languages: SQL (PostgreSQL, SQLite), Python, Bash (Linux), R, DBML, Java, JavaScript/HTML/CSS

Tools & Platforms: Databricks (Delta Lake, Unity Catalog), AWS (S3, Lambda), Git, Tableau, Excel

Focus Areas: ETL & Pipelines, Data Modeling & Quality, Dashboards & Insights, Requirements Gathering
